PROFESSIONAL SUMMARY

Java Spring Boot Developer with 1+ year of experience working on banking applications at TCS. Skilled in RESTful API design, layered architecture, Spring Security (JWT/RBAC), and Spring Data JPA with MySQL and PostgreSQL. Built and deployed Spring Boot projects with secure authentication and transactional processing. Seeking a Java backend developer role.

TECHNICAL COMPETENCIES

- **Languages:** Java, SQL, Python
- **Backend:** Spring Boot, Spring MVC, Spring Security (JWT), Spring Data JPA, Hibernate, REST APIs
- **Database:** MySQL, PostgreSQL
- **Tools:** Git, GitHub, Maven, Postman, Linux/UNIX
- **Frontend (basic):** HTML, CSS, JavaScript, React.js, Tailwind CSS

PROFESSIONAL EXPERIENCE

Associate System Engineer | Tata Consultancy Services **(May 2025 - Oct 2026)**

- Worked on Java and Spring Boot services for banking and mobile banking web applications, updating REST APIs across the controller, service, and repository layers.
- Modified endpoints, entities, and service logic using Spring Data JPA and Hibernate, with request validation, as requirements changed.
- Resolved 15-20 production incidents weekly within SLA timelines by analyzing logs and finding root causes, which kept the applications running.
- Cut average incident-triage time by 30% through SQL-based root-cause analysis.
- Fixed issues and added enhancements to the reporting features of a Regulatory Reporting Tool for a banking client.
- Tested changes with Postman and unit tests before release, and worked with QA and 4 cross-functional teams during Agile sprints.

PROJECTS

Banking Application
https://github.com/Emmanuel-3003/Bank-App
Tech Stack : Java 21, Spring Boot, Spring Data JPA, Hibernate, MySQL, Maven, ModelMapper, Bean Validation

- Developed 10+ REST APIs across customer, account, and transaction modules using a layered Controller-Service-Repository architecture with DTOs and Jakarta Bean Validation.
- Secured the APIs with Spring Security, stateless JWT authentication, BCrypt password hashing, and token revocation on logout, so each customer can access only their own data.
- Implemented deposit, withdrawal, and transfer operations using @Transactional with double-entry debit/credit records to keep balances consistent.
- Built paginated, sortable account statements with date-range filtering, and centralized exception handling for consistent error responses.
- Containerized the backend with Docker and deployed it on Render, with the React frontend on Netlify and the database on TiDB Cloud. Credentials are kept in environment variables.

E-Commerce Backend Application
https://github.com/Emmanuel-3003/E-Commerce
Tech Stack : Java 17, Spring Boot 3, Spring Security, JWT, Spring Data JPA, Hibernate, PostgreSQL, Maven, Swagger

- Developed 20+ REST APIs across 6 modules (authentication, category, product, cart, address, order) using a layered architecture with DTOs.
- Implemented JWT authentication and role-based access control for 3 roles (User, Seller, Admin) using Spring Security.
- Designed the PostgreSQL schema with JPA/Hibernate and added pagination, sorting, keyword search, and image upload.
- Built cart and order workflows with quantity management, multiple shipping addresses per user, and order placement against a selected payment method.
- Documented the APIs with Swagger/OpenAPI and tested them in Postman.

EDUCATION

Bachelor of Engineering (B.E.), Computer Science & Engineering 2020 – 2024
Chandigarh University Chandigarh
GPA: 7.84/10
